

Customising Animations in PowerPoint

You can do more to your objects by using **Custom Animation**.

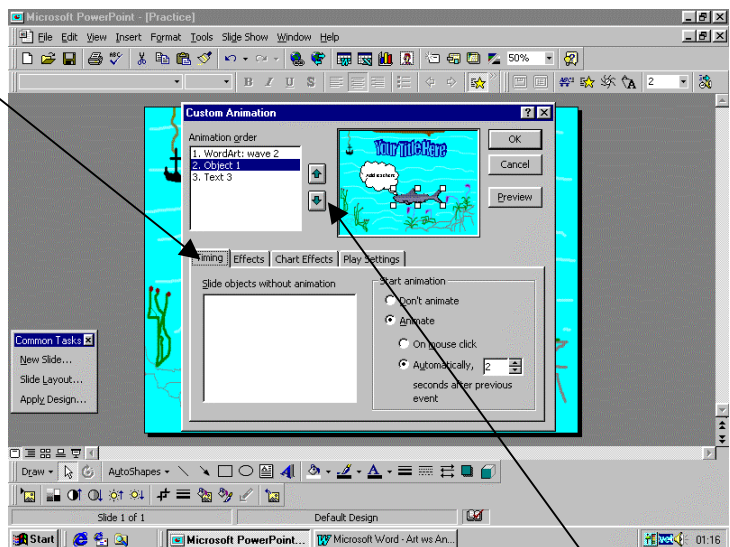

- 1) Select **Slide Show** and then choose **Custom Animation**.
- 2) Highlight the object you want to animate.
- 3) Now choose the **Effects** tab and use the arrows to scroll up or down to see many more effects.
- 4) **Select** one you like. You can use the **Preview** button to see what it's like.

- 5) Now select the **Timing** tab. This allows you to have your objects appear automatically if you wish (without needing to click the mouse). You can also select how long after the previous object.

Tip: 0-2 secs is more than enough.

- 6) After you have made your selections **repeat** for all the objects you want to animate.

- 7) You can change the order in which the objects are animated by using these arrows
- 8) When you have finished check the preview. If you are happy with it **Save work**.

You are now ready to show your presentation!
